

Employer Provided Products

Customize plans with unique add-on products to build a comprehensive benefits package

myHSA's partnerships allow a range of add-ons to pair in addition to a spending account with group pricing and centralized billing.

How does it work?

Employer-provided products are made available to all employees in addition to the company's plan. If added, employees have access to chosen products on their dashboard or through the app. Employees will receive welcome emails from providers once products become active (the 1st of the following month once added).

Products provided through varying partnerships cover a wide range of offerings, from Telemedicine, Critical Illness, EFAPs, and more, along with individual pricing for each – plus the additional admin fee and tax. Companies are billed for products on the last Wednesday or Friday of each month.
